NOSQL Project Tutorial

Setup Environment :

- Git clone repo :
    - git clone https://github.com/Yahya-Regragui/nosql-project.git
- Prerequisites
    - Composer
        - Composer (getcomposer.org)
    - Node, npm
        - Download | Node.js
    - Xampp
        - Download XAMPP (apachefriends.org)

- install dependencies :

    - cd nosql-project/backend
        - composer install

    - cd nosql-project/frontend
        - npm install

Host front-end and backend (Locally)

- cd backend :
    - php artisan serve

- cd frontenf:
    - ng serve --open

- create a database called nosql
- import nosql.sql to nosql db (preferred phpMyAdmin)
- open xampp & launch sql server
